JOHN CABECA SUPERVISORY PATENT EXAMIN' TECHNOLOGY CENTER 21:

Continuation of 11. does NOT place the application in condition for allowance because: The arugments presented by the Applicant's are not persuasive. Claims 82 and 83 has been amended to add the feature the surface of the object which have already been rejected as being previously disclosed in Jacobus, wherein the virtual object is interpreted and disclosed in the specification as a real world object that has been represented in graphic space. The virtual object in Jacobus has been interpreted to be the virtual three dimensinal simulated environment, wherein the arguments point out that this virtual object is not a representation of the real world object. Close examination of Jacobus points out a discussion of how the system of Jacobus is used, wherein clearly pointing out that the virtual object are in fact representations of real world environments that inaccessible by users (column 1, lines 17-35). The interpretation relies on the user position and a relative or fiducial object location, wherein this relative location on the surface of the virtual object, the virtual environment is the orientation of the user. Two distinct data items are used, wherein the user position and user orientation. User orientation relies on the fiducial or relative location on the surface of the virtual object.
